

TEJ BIKRAM THAPA

Fort Worth, TX | 859-628-1668 | tejbikramthapa7008@gmail.com
LinkedIn | GitHub | StayWise Live Project

Professional Summary

Computer Science undergraduate at the University of Texas at Arlington, expected to graduate Fall 2026 with a 3.88 GPA. Skilled in Python, Java, JavaScript, SQL, React, data analysis, and machine learning. Experience developing AI-powered web applications, implementing graph neural network models, and evaluating machine learning algorithms through software and academic projects. Interested in software engineering, data analytics, and machine learning opportunities.

Education

University of Texas at Arlington
Bachelor of Science in Computer Science
GPA: 3.88/4.00

Arlington, TX
Expected Fall 2026

Dallas College
Undergraduate Studies

Dallas, TX

Northern Kentucky University
Undergraduate Studies

Highland Heights, KY

Technical Skills

Programming Languages: Python, Java, JavaScript, SQL, C++, C

Web Development: React, Vite, HTML, CSS

Data Analysis and Visualization: Pandas, NumPy, Excel, Power BI, Tableau

Machine Learning: Scikit-learn, Supervised Learning, Unsupervised Learning, Graph Neural Networks, Model Evaluation

Databases: SQL, MySQL, PostgreSQL, Relational Databases

Developer Tools: Git, GitHub, GitHub Codespaces, Linux, Operating Systems

Technical Projects

StayWise – AI-Powered Housing Search Platform

React, JavaScript, Python, Java

- Developed an AI-powered web application that helps users search for housing and rooms based on personal preferences and requirements.
- Built a natural-language search experience that interprets housing needs and identifies relevant options.
- Contributed to frontend and application development using React, JavaScript, Python, and Java.
- Live Application: staywise-tau.vercel.app

Invoicly – Invoice Management Web Application

React, Vite, JavaScript

- Developed a web application for organizing and managing invoices for freelancers and small businesses.
- Used React and Vite to create a component-based frontend development workflow.
- Used GitHub and GitHub Codespaces for source control and collaborative development.
- Repository: github.com/axp8948/invoicly

Network Traffic Anomaly Detection Using GNNs

Python, Machine Learning, GNN

- Developed an unsupervised machine learning approach to detect anomalous network traffic using graph-based representations.
- Implemented a Graph Convolutional Network autoencoder for feature learning and anomaly detection.
- Analyzed network traffic patterns and evaluated model performance using F1 score and precision-recall metrics.

Machine Learning Model Development and Evaluation

Python, Scikit-learn

- Applied classification, regression, and unsupervised learning techniques to academic datasets.
- Performed data preprocessing, feature analysis, model training, prediction, and performance evaluation.
- Compared machine learning algorithms using appropriate evaluation metrics.

Honors and Activities

- President's Honor Roll and Dean's List
- Upsilon Pi Epsilon (UPE) – Member
- Phi Theta Kappa Honor Society – Member
- Tau Sigma Honor Society – Member
